This guide assumes that we are visualizing at two scales:
1) Jurisdiction (Town) scale
2) RPC (regional planning commission) scale
Under each layer the field to visualize by for each scale will be listed as well as all the fields in the layer

Zoning Atlas Layer
1) Jurisdiction = Jurisdiction field
2) RPC = Jurisdiction field by values (see list of towns in each RPC at bottom)
3) Fields:
    a) Update later

WIM Layers
1) Jurisdiction = Jurisdiction field
2) RPC = RPC field
3) See here for documentation on fields

SchoolsK12 (K-12 school building locations)
1) Fields:
    a) ORGANIZATI = School Name
    b) GRTYPE = Type of School (elementary, middle, etc.)
    c) Sector = Public/Private
    d) City = Jurisdiction
    e) RPC = RPC
    f) DISTNAME = School district name (from school districts layer)
    g) SUPERNAME = Supervisory union name (from school districts layer)
How to visualize at following scales:
2) Jurisdiction = City field
3) RPC = RPC field

PostSecondary (Post Secondary school campus locations)
1) Fields:
    a) SCHLNAME = School Name
    b) Jurisdiction = Jurisdiction
    c) RPC = RPC
How to visualize at following scales:
1) Jurisdiction = City field
2) RPC = RPC field

School Districts Layer
1) Fields:
    a) SCHOOLDIST = School district code

b) DISTNAME = School district name
c) UNIONTYPE = Union type, see [VCGI documentation](#)
d) SUNION = Supervisory union code
e) SUPERNAME = Supervisory union name
f) PopDensityPplPerSqMi = Population density in people per square mile (district scale)
g) Shape_Length / Shape_Area / ObjectID = fields made by ArcGIS Pro, can be ignored

How to visualize at following scales:

1) Jurisdiction = SUPERNAME by RPC
2) RPC = SUPERNAME field
   - (NOTE: do not visualize on a state scale, too many fields and not enough colors will look bad! RPC and Jurisdiction scale should **both** use SUPERNAME, for 2 reasons. 1, individual school districts overlap, and will be hard to visualize, and 2, supervisory unions are the decision makers)
